# Cold gas technology with highest performance KINETIKS-8000-HP in serial production

At obz innovation gmbh the latest cold gas technology, the KINETICS-8000-HP is available now. This coating device enables higher deposition rates, shorter coating times and better coating qualities at consistent process reliability. A further advantage of this state-of-the-art system is the expansion of the material spectrum usable for cold spraying. Higher refraction materials like nickel, titanium, niobium, tantalum or inconel can be applied with better coating quality. Thus new application areas are enabled as base for further innovations in cold spray.
